REVELATOR

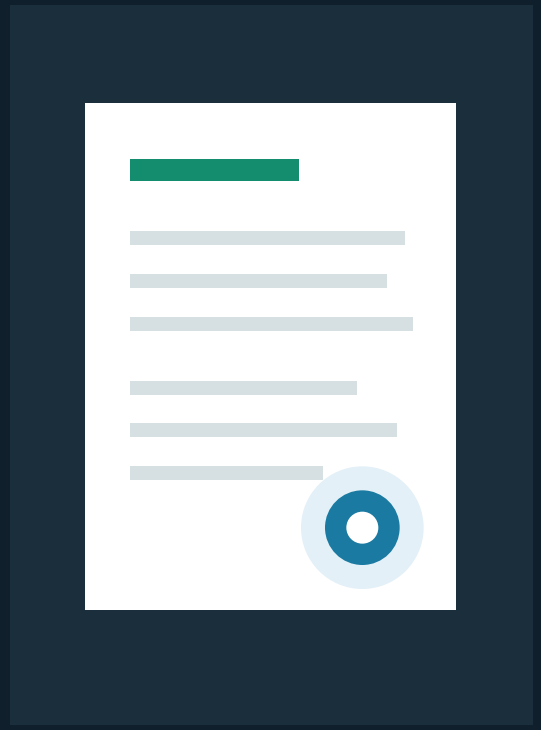
See the signs.

Support the decision.

AI-assisted document forgery screening that helps people decide what needs a closer look.

HUMAN-REVIEW-FIRST

STARTUP CHALLENGE | OCTOBER 2026



PRELIMINARY SCREENING / EXPLAINABLE FINDINGS / HUMAN DECISION

Document checks matter, but specialist review is scarce.

FRONTLINE TEAMS FACE

Visual checks that vary by experience; signs of physical or digital change that can be subtle; and limited access to a document examiner for routine questions.

THE IMPACT

Slow or inconsistent first reviews can delay decisions and leave staff unsure when to escalate. This is a problem hypothesis to validate with local users.

Documents support decisions about:

IDENTITY | EDUCATION | EMPLOYMENT | FINANCIAL ACCESS | PUBLIC SERVICES

Opportunity: make an initial review more consistent without pretending an image alone can prove authenticity.

THE SOLUTION

A clearer first look, with a person in control.

01

CAPTURE

Take a photo or upload a document image.

->

02

SCREEN

Look for visible signs across forgery methods.

->

03

EXPLAIN

Return a preliminary category and findings.

->

04

REVIEW

A person decides whether to accept or escalate.

PRODUCT PROMISE

Support a human decision; do not replace a qualified examination or certify a document.

A clean result is not proof of authenticity. Uncertain and high-stakes cases need human review.

WHAT THE PRODUCT DOES

From image to reviewable screening result.

Photo + file capture

Camera and image-upload workflow

Forgery-method coverage

15 method categories, from erasure to digital fabrication

Evidence-led output

Preliminary verdict, confidence, explanation, and visible annotations when available

Review continuity

Saved scan history and notes for follow-up

Prototype capabilities shown; accuracy and operating limits must be validated in pilot use.

WHO NEEDS IT?

Start where document review is frequent and expert help is far away.

INITIAL PHILIPPINE PILOT SEGMENTS

SCHOOLS

Admissions and registrar teams

LOCAL SERVICES

Document-intensive service desks

SMALL EMPLOYERS

Hiring and credential checks

SMALL LENDERS

First-line document intake

ALTERNATIVES

Manual review, specialist referral, and identity or data-matching tools. Validate where Revelator adds value alongside these controls.

Prospective segments only; no customer or pilot-partner commitments are claimed.

Responsible innovation can strengthen everyday verification.

SDG 16

PEACE, JUSTICE AND STRONG INSTITUTIONS

A preliminary screening layer can help service teams decide which documents deserve closer human review.

SDG 9

INDUSTRY, INNOVATION AND INFRASTRUCTURE

Applies accessible AI to a practical workflow while building local evidence on safe, useful deployment.

VALUE TO VALIDATE

More informed triage | clearer explanations | earlier escalation of uncertain cases | better visibility into review workload

Alignment describes intended contribution, not official endorsement or measured SDG impact.

Build a viable service around trusted, repeatable use.

PROPOSED REVENUE

Individual entry -> Institutional plan

Test a free individual tier and paid organization subscriptions based on reviewer seats or usage, with onboarding and support.

Pricing and unit economics remain to be validated with pilot partners and provider costs.

OPERATING PLAN

- Discover user workflow and safeguards
- Evaluate genuine and altered examples
- Run a limited, human-reviewed pilot
- Measure errors, usability, and demand

A model that can scale only if pilots show:

QUALITY

Precision / recall

USABILITY

Review time / feedback

VIABILITY

Willingness to pay / cost

Commercial path is proposed, not yet proven.

Working prototype. Next, independent evidence.

TODAY

Working prototype

Image submission, AI-assisted method screening, explanations, and scan history are implemented.

NEXT 6 MONTHS

- Secure pilot partners and consented examples
- Benchmark by category on genuine and altered cases
- Test explanations with frontline reviewers
- Publish limitations and a go/no-go recommendation

REPORT THESE, NOT VANITY METRICS

False-positive and false-negative rates | category precision and recall | reviewer time-to-triage | task completion and trust feedback

No external pilot results or independently validated accuracy are claimed in this submission.

Help us validate a responsible pilot.

SEEKING

- Pilot seed funding
- Introductions to document-intensive partners
- AI / compute credits
- Technical and business mentorship

Cash amount: [confirm challenge cap and supplier quotes]

FOUNDING TEAM

Student-led project team

Add founder names, school, roles, and relevant achievements before submission.

Product | Applied AI | Document review

PROPOSED USE OF FUNDS

35%	25%	20%	10%	10%
Product + security	Evaluation + data stewardship	Pilot delivery	Hosting + analysis	Accessibility + outreach

Revelator: a first look to inform the next, human decision.
